

# ACIDHERB®

- Stimulation of digestion
- Stimulation of immunity
- Extension of productivity period

 Animal  
Health Product

## ACIDHERB

– is a natural product for cattle, which increases the time of its breeding potential use, stimulates immunity building, and provides necessary volatile fatty acids when used regularly.

## PURPOSE

**ACIDHERB®** is used in cows in the conditions of poor feed intake and low production parameters.

## COMPOSITION

**Feed materials (in 1 kg of product):**  
**Sodium chloride (11.1.1), Xyloze (13.2.6)**

**Feed additives (in 1 kg of product):**

**Sensory additives:**

alcohol extract of <i>Echinacea purpurea</i>	20 000 mg
<i>Thymus vulgaris</i> oleoresin	3000 mg
<i>Salvia officinalis</i> oleoresin	1700 mg
oil extract from <i>Rosmarinus officinalis</i>	1400 mg

**Technological additives:**

*Category 1a (Preservatives):*

formic acid (E236)	3060 mg
acetic acid (E260)	2730 mg
lactic acid (E270)	1590 mg
antioxidant: ethoxyquin (E324)	100 mg
emulsifier: glycerol polyethylene glycol ricinoleate (E 484)	30 g

## USE

The formulation must be mixed with water and served from feed wagon:

- during lactation: 80 ml/pcs./day
- in the perinatal period: 100 ml / pcs. / day

## INDICATIONS

- poor appetite
- low immunity
- long-lasting diseases of the herd
- high levels of somatic cells

## PROPERTIES

**ACIDHERB®**, when used regularly in the feed, improves the specific immunity of the organism, resulting in maintaining proper levels of somatic cells in milk.

Volatile fatty acids added to the formulation (acetic acid, formic acid, lactic acid), stimulate the digestive system to improve the use of feed ingredients, enhance digestion process, and stimulate the immune system, and also have a bactericidal effect. Due to these properties, Acidherb generates savings on rich feeds while maintaining performance, increases the time of the cattle breeding potential use.

Highly concentrated extracts of thyme and sage (oleoresin form), and extracts of echinacea and rosemary enhance digestion by increasing the secretion of gastric juices and bile, while essential oils, as well as thymol and carvacrol present in these herbs, support the immune system, are antiseptic, accelerate regeneration processes, and stimulate lactation.

The addition of xylose improves taste of the feed, and sodium favourably affects the buffering system that is to neutralise an excessive acidification of the organism.

**ACIDHERB**, when used during the perinatal period, prevents deficiency of energy and consequently the development of metabolic diseases such as ketosis.

## BENEFITS

- **stimulation of digestion**
- **stimulation of immunity**
- **extension of productivity period**
- **reduction in the number of somatic cells in milk**
- **milk production yield increase**
